

The Future: Transportation

220 MILLION

**THE NUMBER OF CONNECTED
CARS WHICH WILL BE ON THE
ROAD BY 2020**

Transportation has already been affected by the IoT but has the potential to experience a complete change thanks to the technology.

- The ability to communicate with each other in real time using data could drastically improve the safety on the road.
- Help drivers who may be impaired, falling asleep or those that might be suffering from a medical emergency.
- Monitor a vehicle's age, fuel performance, braking, and speed,
- Constant real-time data on traffic, closed roads, and the travel schedule of public transportation.
- Public transport to send personalised travel information about unexpected delays or events that could be delaying a commute.
- Fully automated wireless temperature monitoring and alerting systems using the latest technology providing 24/7 management of all temperature sensitive products.
